

Paxum® Green

Hand Pallet Wrap

500mm x 12um 6 rolls/ctn

30% Post-Industrial Waste Recycled Content

#30132

**Innovative
Thin Gauge**

**Sustainable
Solution**

**High Load
Containment Force**

**Unparalleled
Tear Resistance**

Gateway Packaging is committed to the reduction of plastic waste through the active pursuit of products that comply with and support the cyclical system of production. The idea of a cyclical system of production has been around since early 1966. However, the term circular economy appeared for the first time in 1988.

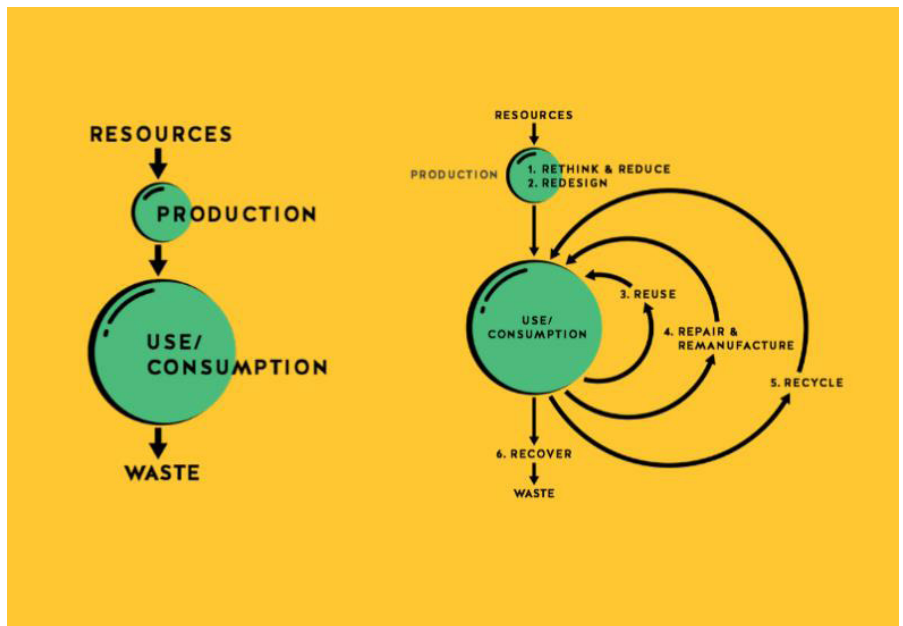

Our economy has always been linear. That means we take raw materials, make them into products, then once used, namely packaging, we throw them away. In the recycling economy, we reuse materials by giving them a new life. However, to ensure our dwindling resources are sufficient now and in the future, we must adopt a circular economy.

The aim of a circular economy in packaging is to:

- Prevent wastage
- Make products more efficient
- Reuse materials
- And when new raw materials are needed, they are obtained sustainably, so we do not damage our natural and human environment.

The Paxum Green range of stretch wrap films is manufactured using 30% post-industrial waste recycled content. The post industrial waste (PIW) is reclaimed and converted back into recycled material that in turn is used in the manufacture of stretch wrap film. Thus complying with the circular economy concept.

The Paxum Green range of stretch wrap film, manufactured with 30% post-industrial recycled material is sourced from manufacturers that have been awarded the ISCC PLUS Certification. This is a sustainability certification program covering bio-based and circular (recycled) raw materials. The guarantee with ISCC PLUS certification is the traceability of the raw materials used.

Benefits

- Innovative thin gauge film
- Sustainability. Reduces CO2 emissions with 30% post-industrial waste recycled content
- High load containment force
- Unparalleled puncture and tear resistance
- Significant cost saving per pallet wrapped
- Excellent load retention

Properties

- Manufactured using state-of-the-art technology
- Quiet application for reduced decibel level in workplace
